

## PROJECT PROFILE

### Green Bay Packers Titletown Sledding Pavilion

Over 9,000 sq. ft. of extruded concrete “Okoskin” was installed on the Green Bay Packers Titletown District Sledding Hill. The Green Bay Packers had a vision to create a sports anchored development that not only captures the passion of Packers fans on game day, but also promotes flexible year-round programming.

Architects sought the help of Hughes Group and Centerline Architectural Supply to deliver a high-performance building envelope solution. Custom curved aluminum horizontal sub-framing was fabricated, warehoused, and delivered by Centerline, and installed on the barriers and side profile of the entire 46-foot high hill. “Okoskin” was then installed over the sub-framing to create a modern and clean effect.

Now completed, Titletown’s park features an ice-skating rink and tubing lanes down Ariens Hill in the winter, a full-size football field, a unique playground and plenty of outdoor games and fitness activities, all in the heart of the action. Future development includes retail, commercial and residential elements.

**Architect:** Rossetti | Detroit, MI

**General:** Miron Construction Co., Inc. | Neenah, WI

**Installer:** Construction Supply & Erection | Germantown, WI

**Cladding:** Extruded Concrete “Okoskin” | 9,000 sq. ft.

**Custom Attachment System:**

Curved, Extruded Aluminum Horizontal Sub-Framing

Pre-fabricated and customized curved aluminum horizontal sub-framing

Extruded concrete "Oko Skin" cladding

## Centerline Fabrication Overview

All 9,000 sq. ft. of extruded concrete "Oko Skin" cladding was secured using a unique and fully-customized attachment system from Centerline Architectural Supply.

Centerline supplied the contractor with curved aluminum horizontal sub-framing that was pre-fabricated and warehoused off-site in one turnkey solution. After delivering the cladding and custom attachment system, Centerline installed the sub-framing and attached the Oko Skin panels to manufacturer specifications—saving time, money, and labor.
